

Indigenous.Link

Canada's fastest growing Indigenous career portal, Careers.Indigenous.Link is pleased to introduce a new approach to job searching for Indigenous Job Seekers of Canada. Careers.Indigenous.Link brings simplicity, value, and functionality to the world of Canadian online job boards.

Through our partnership with Indigenous.Links Diversity Recruitment Program, we post jobs for Canada's largest corporations and government departments. With our vertical job search engine technology, Indigenous Job Seekers can search thousands of Indigenous-specific jobs in just about every industry, city, province and postal code.

Careers.Indigenous.Link offers the hottest job listings from some of the nation's top employers, and we will continue to add services and enhance functionality ensuring a more effective job search. For example, during a search, job seekers have the ability to roll over any job listing and read a brief description of the position to determine if the job is exactly what they're searching for. This practical feature allows job seekers to only research jobs relevant to their search. By including elements like this, Careers.Indigenous.Link can help reduce the time it takes to find and apply for the best, available jobs.

The team behind Indigenous.Link is dedicated to connecting Indigenous Peoples of Canada with great jobs along with the most time and cost-effective, career-advancing resources. It is our mission to develop and maintain a website where people can go to work!

Description

Requisition ID: 201359

Join a purpose driven winning team, committed to results, in an inclusive and high-performing culture. The Team Global Banking and Markets Engineering (GBME) is the fast-moving, award-winning technology engine that powers Scotiabank's Corporate, Investment Banking and Capital Markets businesses. The Role GBME is searching for Software Engineers who are continuous learners and are eager to boost capabilities of capital markets products and analytics platforms. The successful candidate will have a strong technical and engineering mindset. You will work closely with business teams and cross functional engineering leaders to develop and implement market leading solutions for the various projects within GBME. Do you thrive when faced with challenges Like using fresh technologies to solve problems Looking to work in various projects across the organization, collaborating with great teams and inspiring leaders Then this is the right team for you! In this exciting role, you'll apply your analytical skills to design and develop applications that deliver excellence, effectiveness, and value to our business partners and customers. Is this role right for you In this role you will: Work closely with end users, and business teams to understand business needs, conduct gap analysis and requirements assessments as needed Partner with Architecture on the design and integration Deliver and enhance new and current solutions and applications Be involved in the full life cycle of a project, responsible for producing actionable and complete specifications, writing production quality code, and implementation Design, deliver and implement a database schema Design test sets and automate where possible, including functional and non functional testing, regression testing as well as performance testing Write deployment scripts and leverage tools such as the Accelerator pipeline to promote code Support the solution in production (as needed) Improve the end user experience by finding scalable solutions and addressing complex ad hoc queries. Effectively communicate with technical and non-technical audiences Able to work with and refactor legacy code (as needed). Coach and train end users (as needed). Participate and run SCRUM Meetings (as needed).

Do you have the skills that will enable you to succeed in this role We'd love to work with you if you have: Technical Qualifications Experience with 2 or more modern development languages (Python, Java, etc.) 4+ years' experience developing, deploying, and maintaining large scale applications with complex integration. Recent experience with relational and non relational databases. 2 + years' experience reading, writing, and running SQL scripts. Experience with UNIX Shell scripting in Sun Solaris/Linux environments Experience working in an Agile environment, with experience and understanding of Test-Driven Development methodology. Bachelor's degree in computer science, Engineering or relevant experience.

Preferred Qualifications (Nice to Have Skills) Experience with some automated deployment. Understanding of networking protocols and security principles Capital Markets product knowledge Cloud, Kubernetes experience Experience with Messaging BUS/Brokers; IBM MQ/ Kafka/ Redis Experience working with real-time, high availability and low latency systems Experience in java multi-threaded applications
