

Indigenous.Link

Canada's fastest growing Indigenous career portal, Careers.Indigenous.Link is pleased to introduce a new approach to job searching for Indigenous Job Seekers of Canada. Careers.Indigenous.Link brings simplicity, value, and functionality to the world of Canadian online job boards.

Through our partnership with Indigenous.Links Diversity Recruitment Program, we post jobs for Canada's largest corporations and government departments. With our vertical job search engine technology, Indigenous Job Seekers can search thousands of Indigenous-specific jobs in just about every industry, city, province and postal code.

Careers.Indigenous.Link offers the hottest job listings from some of the nation's top employers, and we will continue to add services and enhance functionality ensuring a more effective job search. For example, during a search, job seekers have the ability to roll over any job listing and read a brief description of the position to determine if the job is exactly what they're searching for. This practical feature allows job seekers to only research jobs relevant to their search. By including elements like this, Careers.Indigenous.Link can help reduce the time it takes to find and apply for the best, available jobs.

The team behind Indigenous.Link is dedicated to connecting Indigenous Peoples of Canada with great jobs along with the most time and cost-effective, career-advancing resources. It is our mission to develop and maintain a website where people can go to work!

Description

General Description

The Developer (I) programs and develops applications software that meet specified client and business requirements. Provides input into the planning of the work packages based on expertise and understanding of the current applications and systems and the impact that they will have on the current production environment. Works under routine supervision without frequent reference to others and uses minor discretion to resolve various problems and inquiries. Specific instruction is given and work is frequently reviewed.

Representative Duties & Responsibilities

- Write programs of moderate complexity using various computing and scripting languages
- Debug computer program code
- Develop and modify interfaces for existing applications and systems while maintaining the integrity of data and processes
- Develop components for new multi-faceted computer systems and revise existing systems comprised of numerous application components
- Work with and understand complex data models and databases for the most effective and efficient organization of data based on processing requirements
- Contribute to the review, development, and modification of best practices and technical solutions
- Communicate project, issue, and system status to project leads and managers
- Perform load and stress testing to anticipate the impact of application usage on the production service environment
- Complete calculations used to estimate various capacity requirements such as database size
- Search and gather information from a variety of sources including computer applications, internet, and legislative documentation and consolidate relevant information to complete environmental scans
- Develop time and cost estimates for project assignments
- Work cooperatively with others to effectively determine information and understand business requirements of a complex nature
- Deliver presentations to team members as it relates to project work
- Exchange technical information with colleagues during the application development process
- Explain and exchange technical concepts and information to clients in a non-technical manner to ensure that the customer comprehends the issue
- Provide advice to customers on alternative and recommended approaches to computing system solutions for meeting their business requirements
- Provide production service implementation training to clients
- Provide expertise and working knowledge of application components such as internet, intranet, mainframe, personal computer, and database structures
- Interpret complicated technical program specification documents, translate, and develop into application code
- Prepare and review operations documentation, training materials, and timelines
- Provide Level III post implementation support to users regarding technical issues
- Take ownership of technical issues by identifying underlying problems, analyzing potential solutions and implementing system resolutions, including workarounds

- Apply and enforce department change control policies and procedures
- Participate in all phases of testing including, but not limited to, system, integration, acceptance, regression, and performance
- Manage defects identified during all phases of a project
- Resolve problems in the test, production implementation, and post-implementation phases in coordination with other technical and business groups
- Communicate testing results to others
- Maintain information technology process flow, methodology, and control documentation
- Update and maintain knowledge of application components such as, internet, intranet, personal computer, and database structures
- Remain current with relevant development and project methodologies
- Remain current with frequent updates and changes to technology
- Work with project leads and managers to prioritize and schedule issues resolution
- Remain current with security policies and procedures and work with System Administrators to implement security changes
- Facilitate effective dialog between technical staff
- Read and understand complex Business Process Diagrams and develop basic (Level II) models
- Read and understand a complex project plan and develop simple project plans
- Understand the different levels of testing and develop simple use cases and test scripts
- Follow a test script and document defects
- Acquire and maintain a basic understanding of Business Intelligence and Data Warehousing principles
- Develop simple queries using basic Business Intelligence tools
- Provide recommendations to supervisor
- Perform a range of varied work activities in a variety of structured environments
- Understand and use appropriate methods, tools, and applications to complete work tasks
- Demonstrate a rational and organized approach to work and identify development opportunities
- Plan, schedule, and monitor own work within short time horizons
- Absorb technical information when it is presented systematically and apply it effectively
- Organize time, work and resources to accomplish objectives in the most effective and efficient way
- Use measurement methods to monitor progress toward goal attainment, tenaciously working to meet or exceed those goals, while deriving satisfaction from the process of goal achievement and continuous improvement
- Ensure that the internal and external customer perspective is a driving force behind decisions and activities
- Follow service practices that meet customers' and University needs
- Interact with others in a way that gives them confidence in one's intentions and those of the University
- Work collaboratively with others to achieve departmental and institutional goals. Actively participate as a member of a team to move the team toward the completion of goals.
