

Indigenous.Link

Canada's fastest growing Indigenous career portal, Careers.Indigenous.Link is pleased to introduce a new approach to job searching for Indigenous Job Seekers of Canada. Careers.Indigenous.Link brings simplicity, value, and functionality to the world of Canadian online job boards.

Through our partnership with Indigenous.Links Diversity Recruitment Program, we post jobs for Canada's largest corporations and government departments. With our vertical job search engine technology, Indigenous Job Seekers can search thousands of Indigenous-specific jobs in just about every industry, city, province and postal code.

Careers.Indigenous.Link offers the hottest job listings from some of the nation's top employers, and we will continue to add services and enhance functionality ensuring a more effective job search. For example, during a search, job seekers have the ability to roll over any job listing and read a brief description of the position to determine if the job is exactly what they're searching for. This practical feature allows job seekers to only research jobs relevant to their search. By including elements like this, Careers.Indigenous.Link can help reduce the time it takes to find and apply for the best, available jobs.

The team behind Indigenous.Link is dedicated to connecting Indigenous Peoples of Canada with great jobs along with the most time and cost-effective, career-advancing resources. It is our mission to develop and maintain a website where people can go to work!

Web Address	https://careers.indigenous.link/viewjob?jobname=250981-en_US-2932	
Company	Rogers	
Location	Brampton, ON	
Date Posted	From: 2021-10-18	To: 2050-01-01
Job	Type: Full-time	Category: Telecommunications

Description

At Rogers, we connect Canadians to a world of possibilities and the memorable moments that matter most in their lives. Every day we wake up with one purpose in mind. To bring loved ones together from across the globe. To connect people to each other and the world around them. To help an entrepreneur realize their dream. A sports fan celebrate a special moment. Because we believe connections unite us, possibilities fuel us, and moments define us. As we grow our team, the well-being of our team members remains our top priority. To ensure the health and safety of our team members, including those in the recruitment process, our team members are working from home, and are equipped to do so safely and efficiently.

Senior Network Designer

Reporting to the Manager, Engineering & Wireless Data Core, the Senior Network Designer will be the Senior technical Subject Matter Expert (SME) to drive the design, development, testing, engineering, implementation and evolution for Wireless Data Core platforms to a cloud native environment.

Key Responsibilities and Job Functions:

- Take full accountability and ownership in all standard DevOps deliverables (design, integration, testing, troubleshooting) for wireless data core platforms, including but not limited to the following:
 - 5G Standalone Core (5GC): AMF, SMF, UPF, AUSF, UDM, UDR, NRF, NEF, NSSF
 - Evolved Packet Core (EPC): MME, PGW, SGW, HSS, ePDG
 - Cloud Native (Docker/K8s) and hypervisor-based NFV environments and associated cloud tools
- Design, integrate and deploy next generation cloud native network functions based on Docker and Kubernetes (K8s)
- Utilize cloud and virtualization tools to automate workflows, CNF/VNF platform lifecycle management, issue troubleshooting, integration validation, end to end testing, and KPI reporting
- Author technical engineering documentation (eg. Engineering Design Specification Documents, Acceptance Test Plans, Work orders and Method of Procedures (MoP) which facilitates configuration changes, software/hardware upgrades, validations, E2E service testing and platform integration)
- Assess technical requirements, solutions designs and provide engineering analysis, requirements and costs for the implementation and deployment of new services and platforms
- Manage Vendor relationships to complete their deliverables of the solution. (eg. review of quotes, scope of work documents, solution requirements, design specifications, acceptance test plans, MOPs, and roadmap of platform evolution)
- Co-ordinate and work closely with peer departments (eg. Project Management, Network Operations, Network Planning, Product Development, IT, Engineering, etc.) for end-to-end service integration and implementation
- Provide engineering input for technical solutions related to the deployment of new services and technology
- Perform lab design, implementation, and validation to simulate changes in a controlled environment prior to production rollout
- Provide troubleshooting support to Operations and peer technical teams
- Provide technical guidance to junior team members
- Conduct what-if simulations and bottleneck analysis to quantify the impact on network as a result of new services and technologies rolled out on network
- Prepare presentations and reports to management as required
- Work in a tight, highly motivated, team environment taking on leadership responsibility when necessary

Qualifications:
