Indigenous.Link

Canada's fastest growing Indigenous career portal, Careers.Indigenous.Link is pleased to introduce a new approach to job searching for Indigenous Job Seekers of Canada. Careers.Indigenous.Link brings simplicity, value, and functionality to the world of Canadian online job boards.

Through our partnership with Indigenous.Links Diversity Recruitment Program, we post jobs for Canada's largest corporations and government departments. With our vertical job search engine technology, Indigenous Job Seekers can search thousands of Indigenous-specific jobs in just about every industry, city, province and postal code.

Careers.Indigenous.Link offers the hottest job listings from some of the nation's top employers, and we will continue to add services and enhance functionality ensuring a more effective job search. For example, during a search, job seekers have the ability to roll over any job listing and read a brief description of the position to determine if the job is exactly what they're searching for. This practical feature allows job seekers to only research jobs relevant to their search. By including elements like this, Careers.Indigenous.Link can help reduce the time it takes to find and apply for the best, available jobs.

The team behind Indigenous.Link is dedicated to connecting Indigenous Peoples of Canada with great jobs along with the most time and cost-effective, career-advancing resources. It is our mission to develop and maintain a website where people can go to work!

Description

Working at CBC:

At the CBC, we all have a story to tell. Whatâ€™s yours

If you share our passion for Canadian storytelling and you wish to help us engage with individuals and communities across our various digital platforms, this is where youâ€™ll want to be!

Every day, you will have an opportunity to shape the way in which Canadians see themselves reflected in our digital services. Your work will have a direct impact on how millions of Canadians from various communities connect with our products, with one another, and with the diverse voices that make our country so unique.

You will have the opportunity to play a part in enlightening and entertaining Canadians through our innovative work in building the mediums that deliver our content. We are an innovative hub, where the talented professionals we work with are respected and valued for their contributions. Our product teams are vibrant and our work culture strives to achieve the highest standards of diversity and inclusion. We believe that hiring people with different career paths and backgrounds is fundamental in our shared success and in building healthy and highly performant teams. When you join our mission, you are not only shaping the vision of the CBC, but the future of our country.

Why is this role important

CBC Digital Products is on a mission to harmonize two technology stacks and build an over-the-top (OTT) media streaming offering for both English and French services. Based in both Toronto and Montreal, the innovative and collaborative OTT team is creating the next generation of video-streaming experience for both English and French-speaking Canadians and the internal systems used for content management, customer relations, and data analytics.

Reporting to the Senior Manager, Digital Products, and working under the direction of the Senior Manager, OTT Harmonization, we are adding a Backend Developer to the Toronto team. This is a contract opportunity ending March 31st, 2022. This is currently a remote role with the requirement to be in-office once the Covid-19 pandemic restrictions are lifted and it is deemed safe for our team to be together.

As part of a cross-functional Agile product team, you will focus on creating a single repository code base and infrastructure to harmonize the metadata, the video delivery, and the CMS used to

manage the content lineup that services millions of Canadians. Leveraging existing APIs, you will create and organize efficient code that allows the OTT team to enable English and French content releases to happen consecutively or simultaneously while maintaining two distinct brands with unique content.

This is an exciting opportunity to play a critical role in building a scalable, resilient infrastructure to deepen our connection with millions of Canadians from coast-to-coast-to-coast accessing our content through ICI-TOU.TV and CBC Gem. Your work will enable us to operate at a high velocity, keeping up with other streaming services in an ever-changing environment.

Here's why we should work together:

Our digital teams' values - collaboration, learning, and continuous improvement - embody who we are as a people-focused, digital-forward employer. We follow lean startup principles and use an Agile approach. Our dedicated people managers work closely with every individual to ensure we are leveraging their strengths, championing their ideas and supporting their pursuit of new skills and their desired career progression.

Here at CBC Digital Strategy & Products, we want you to be happy and feel good at work. It is essential that work be a safe space where our employees are able to share their authentic selves with one another and to push each other to challenge conventions.

Perks you can look forward to:

Flexible work schedules, allowing you to prioritize yourself, your family and your work;

Work from home opportunities;

Competitive total rewards package;

20% of time for innovation, learning and development; wherever your interests lie;

Opportunities to work with cutting edge technology;

Opportunities for continued learning and professional development;

Opportunities to become a member of our Employee Resource Groups;

Pair programming and mentorship opportunities, where you can learn from the best in the industry and help coach new talent;

A creative and dynamic work environment, where your ideas and contributions can be heard, valued and respected;

A supportive management team committed to upholding the highest standards of diversity and inclusivity;

An environment which favours experimentation and an iterative approach in order to achieve the highest form of technical innovation.

How you will make an impact:

You will collaborate with teams in both Toronto and Montreal to ensure that the OTT product successfully interacts and interfaces with existing media infrastructure.

You will support harmonization of technology and code across ICI-TOU.TV and CBC Gem, ensuring a seamless backend experience for metadata management, video delivery, user and subscription management, and lineup management.

You will help the team keep up-to-date on the latest developments in technology, ensuring that our products remain modern, scalable, and performant.

Experience

You have five or more years of hands-on professional experience creating resilient and scalable backend code for large complex web-based applications. You understand how to build infrastructure

that supports and draws from high volumes of data and metadata.

Education Requirements

A degree in Computer Science, Engineering, Math, or equivalent is preferred, but we know not everyone gains their programming skills this way.

Essential Skills

What you could bring to our team:

The technical knowledge. You have expertise in object-oriented design and architecture (OOD and OOA), server-side C#, and writing code accompanied by unit tests to ensure complete code coverage. You are proficient in:

ASP.NET Core and Web API.

Visual Studio or VS Code.

MS SQL, MongoDB, ElasticSearch.

OAuth 2.0 protocol.

Git.

The motivation. You can quickly learn new technologies and respond to change by learning and adapting. You are forward-thinking and want to expand your reach, contributing to the breakdown of work and planning tasks.

The Agile team approach. You believe in the Agile methodology deeply, but you are flexible and open to real-world twists and turns, and you are comfortable with iterative and incremental development. You thrive in a team-focused environment, and you know how to listen, relay empathy, and appreciate diverse perspectives.

The bonus skills. You have:

Experience with TypeScript.

Familiarity with Docker containerization.

Familiarity with Cloud environments such as Azure.

Exposure to Layer7, Viafoura, Zuora, or LoginRadius.

Knowledge of GraphQL.

Bilingualism in English and French (spoken and written) is an asset.

The flexibility. You are comfortable returning to work in-office full time when required.
