Indigenous.Link

Canada's fastest growing Indigenous career portal, Careers.Indigenous.Link is pleased to introduce a new approach to job searching for Indigenous Job Seekers of Canada. Careers.Indigenous.Link brings simplicity, value, and functionality to the world of Canadian online job boards.

Through our partnership with Indigenous.Links Diversity Recruitment Program, we post jobs for Canada's largest corporations and government departments. With our vertical job search engine technology, Indigenous Job Seekers can search thousands of Indigenous-specific jobs in just about every industry, city, province and postal code.

Careers.Indigenous.Link offers the hottest job listings from some of the nation's top employers, and we will continue to add services and enhance functionality ensuring a more effective job search. For example, during a search, job seekers have the ability to roll over any job listing and read a brief description of the position to determine if the job is exactly what they're searching for. This practical feature allows job seekers to only research jobs relevant to their search. By including elements like this, Careers.Indigenous.Link can help reduce the time it takes to find and apply for the best, available jobs.

The team behind Indigenous.Link is dedicated to connecting Indigenous Peoples of Canada with great jobs along with the most time and cost-effective, career-advancing resources. It is our mission to develop and maintain a website where people can go to work!

Description

About Toronto Metropolitan

At the intersection of mind and action, Toronto Metropolitan University is on a transformative path to become Canada’s leading comprehensive innovation university. Integral to this path is the placement of equity, diversity and inclusion as fundamental to our institutional culture. Our current academic plan outlines each as core values and we work to embed them in all that we do.We welcome those who have demonstrated a commitment to upholding the values of equity, diversity, and inclusion and will assist us to expand our capacity for diversity in the broadest sense. In addition, to correct the conditions of disadvantage in employment in Canada, we encourage applications from members of groups that have been historically disadvantaged and marginalized, including First Nations, Metis and Inuit peoples, Indigenous peoples of North America, racialized persons, persons with disabilities, and those who identify as women and/or 2SLGBTQ+. Please note that all qualified candidates are encouraged to apply; however, applications from Canadians and permanent residents will be given priority.In April 2022, the university announced our new name of Toronto Metropolitan University, which will be implemented in a phased approach. Learn more about our next chapter.The team Computing and Communications Services (CCS) is TMU’s central IT organization, supporting the university’s voice and data communications, server and storage infrastructure, printing, end-user computing support, computer labs, learning management system, application support, web application development, streaming media services, presentation technology-enabled classrooms and much more.We are extremely proud of our university and what we are accomplishing as a department. We welcome you to get to know our people and services better before you decide to apply to join our team. Visit us at http://www.torontomu.ca/ccs/ and search @torontomet and @bdlesser on Twitter.

The Opportunity

The Application Infrastructure team develops, builds and supports applications and services that connect with various systems within Toronto Metropolitan University. Our applications integrate data among different sources, manage Toronto Metropolitan University’s users online identity and resources and provide convenient and collaborative tools for academic and administrative tasks.We’re seeking an Intermediate Java Application Developer who will work closely with faculty and staff to design, implement, test, and support n-tier web applications across TMU which are robust and secure and which provide optimal academic and administrative value. You will be part of a software development team with expertise in Java, Spring Framework, Web Services, and other technologies. A major part of your role will be to develop, integrate and build upon the University's identity management system, as well as to develop and maintain new/existing tools, components and applications.Qualifications

To help us learn more about you, please provide a cover letter and resume describing how you meet the following required qualifications:

- Successful completion of a four year post-secondary degree in Computer Science, or Electrical Engineering, Mathematics with a minor specialization in Computer Science;
- A minimum of three years experience of application development and support that includes every phase of project management: requirement analysis design, implementation, testing and maintenance and hands-on experience in

Java/Java EE, Application/Web Servers, Spring Boot, Spring Batch, Web Services, APIs, SQL, ORM, CSS, Javascript. Experience in Jenkins, Docker/OpenShift, Google Workspace, Python, Angular 2+ is considered an asset;
- Extensive theoretical and practical knowledge and demonstrated currency in:
- Software development cycle
- Agile development
- System/application security, including OWASP security principles
- Data modeling and database design
- Application administration
- System/application security, SSL
- Authentication / SSO
- API design and development
- Version control systems (Git is preferred)
- Unit, integration and functional testing

- A demonstrated commitment to client service, excellent interpersonal skills are required;
- Ability to work both independently and as part of a team;
- Aptitude for self-directed learning and collaborative development with the team;
- Excellent oral and written communication skills;
- Excellent judgment, decision-making and problem solving skills are required;
- Strong analytical skills are needed to analyze requirements for consistency, technical feasibility and costs; developing systems plans, including requirements for distributed client and server applications and networked hardware and software;
- Strong organizational, multitasking and time management skills;
- An equivalent combination of education and experience may be considered.
