

Indigenous.Link

Canada's fastest growing Indigenous career portal, Careers.Indigenous.Link is pleased to introduce a new approach to job searching for Indigenous Job Seekers of Canada. Careers.Indigenous.Link brings simplicity, value, and functionality to the world of Canadian online job boards.

Through our partnership with Indigenous.Links Diversity Recruitment Program, we post jobs for Canada's largest corporations and government departments. With our vertical job search engine technology, Indigenous Job Seekers can search thousands of Indigenous-specific jobs in just about every industry, city, province and postal code.

Careers.Indigenous.Link offers the hottest job listings from some of the nation's top employers, and we will continue to add services and enhance functionality ensuring a more effective job search. For example, during a search, job seekers have the ability to roll over any job listing and read a brief description of the position to determine if the job is exactly what they're searching for. This practical feature allows job seekers to only research jobs relevant to their search. By including elements like this, Careers.Indigenous.Link can help reduce the time it takes to find and apply for the best, available jobs.

The team behind Indigenous.Link is dedicated to connecting Indigenous Peoples of Canada with great jobs along with the most time and cost-effective, career-advancing resources. It is our mission to develop and maintain a website where people can go to work!

PURPOSE OF THE POSITION: Design, Develop and Enhance rich Java user-interface applications with middle-tier (messaging) and other back-end processes and applications, in a large, complex, transactional based environment.

ACCOUNTABILITIES:

- Gather, refine, and document system requirements to ensure functionalities follow best practice methodologies;
- Code, test, document and deliver requested functionality changes or enhancements to new or existing enterprise applications;
- Produce technical documentation (i.e. requirements, design documents, turnover documentation, test plans) for requested functionality changes or enhancements;
- Work within established CP software development standards and configuration management procedures and processes;
- Assist in the creation of the system design and functional specifications;
- Provide Functional Support for applications as needed;

- Responsible for developing and testing solutions, coordinate the implementation and completion of recommended specifications application;
- Provide code and database administration in live and test environments;
- Write technical procedures and documentation for the applications including operations, user guide, etc.;
- Participate in meetings with team to discuss progress and issues to be resolved, and report progress on a weekly basis to the Project Manager. Various other duties as required.

POSITION REQUIREMENTS:

- University Degree in Computer Science, Information Systems, or equivalent Application development experience;
- 5+ years of Java Application Development experience;
- 5+ years of COBOL Application Development experience;
- Proven hands-on Software Development experience;
- Proven working experience in Java development;
- Hands on experience in designing and developing applications using Java EE platforms;
- Object oriented analysis and design using common design patterns;
- Profound insight of Java and JEE internals (Classloading, Memory Management, Transaction management etc);
- Excellent knowledge of Relational Databases, SQL technologies (JDBC);
- Experience with complex data relationships and operating environments;
- Proven ability to prioritize multiple work assignments ;
- Proven problem solving abilities;
- Willingness to accept responsibility for delivering solutions to complex issues;
- Strong understanding of object oriented design fundamentals, including patterns such as MVC, REST, and dependency injection;
- Knowledge of the Java enterprise application ecosystem;
- History creating and working with JSON and XML based web services;
- Experience with Tomcat, Web sphere Application Server or similar;
- Working proficiency with Linux in server environments;
- Advanced SQL – modeling, advanced query writing, tuning/optimization of queries;
- Experience with MQ messaging or other messaging systems;
- Experience working closely with the business to arrive at an optimal solution in terms of functionality, timelines, and implementation;
- Experience with agile development methodologies;
- Experience in the Spring Framework;
- Experience with test-driven development;
- Experience with Micro Focus Visual COBOL and Object Oriented COBOL.
- Experience with Micro Focus Visual COBOL COBJVM integration.
- Experience with COBOL Embedded SQL.
