Indigenous.Link

Canada's fastest growing Indigenous career portal, Careers.Indigenous.Link is pleased to introduce a new approach to job searching for Indigenous Job Seekers of Canada. Careers.Indigenous.Link brings simplicity, value, and functionality to the world of Canadian online job boards.

Through our partnership with Indigenous.Links Diversity Recruitment Program, we post jobs for Canada's largest corporations and government departments. With our vertical job search engine technology, Indigenous Job Seekers can search thousands of Indigenous-specific jobs in just about every industry, city, province and postal code.

Careers.Indigenous.Link offers the hottest job listings from some of the nation's top employers, and we will continue to add services and enhance functionality ensuring a more effective job search. For example, during a search, job seekers have the ability to roll over any job listing and read a brief description of the position to determine if the job is exactly what they're searching for. This practical feature allows job seekers to only research jobs relevant to their search. By including elements like this, Careers.Indigenous.Link can help reduce the time it takes to find and apply for the best, available jobs.

The team behind Indigenous.Link is dedicated to connecting Indigenous Peoples of Canada with great jobs along with the most time and cost-effective, career-advancing resources. It is our mission to develop and maintain a website where people can go to work!

Description

BC Public Service

There are currently 2 positions available. We offer flexible work arrangements, including the opportunity to volunteer to telework (with conditions) as set out in applicable employer policies. The locations listed above are to assist applicants in searching for this opportunity. This position may be performed in other approved locations within the province of BC.

Site Reliability Specialist

This corporate posting will also be used to establish a cross-ministry eligibility list to fill future permanent vacancies in multiple ministries and locations identified in this posting. Positions from the list will be offered in rank order, as vacancies arise, based on the locations applicants have selected during the hiring process. Some positions may be performed from any approved location within the province of BC through a voluntary telework agreement (with conditions as set out in applicable employer policies), other positions may have office based requirements. Applicants will be asked to indicate their preferred work location(s) at a later stage in the process.

An excellent opportunity to join this dynamic team and apply your technological skills

The BCDevExchange organization embraces experimentation, innovation and empowerment. By adopting the principles, values and practices of the BCDevExchange, partner government entities adapt their typical ways of working to better align with leading practice amongst technology companies and digital agencies. Our work centers around the Exchange Lab (previously known as the Continuous Service Improvement, or CSI Lab) - where we host digital delivery teams working to solve priority public challenges.

The Site Reliability Specialist is part of a cross-functional team with the DevOps and Cloud Services Branch. This role combines software and systems engineering to build and run at scale, distributed and fault-tolerant software products and platforms as a service. This role ensures that services have reliability, uptime appropriate to create happy clients and partners, while supporting the demand of DevOps to deliver at a fast rate of improvement. The position keeps an ever-watchful eye on the system's capacity and performance.

Qualifications for this role include:

- Bachelor's degree in Computer Science *plus related experience; OR
- An equivalent combination of education and experience may be considered.
- Minimum two (2) years' experience with continuous integration, continuous delivery, and continuous deployment principles.
- Minimum two (2) years' experience analyzing and troubleshooting systems, monitoring availability and/or practicing complete view of system health, maintenance, and reliability.
- Experience with providing guidance and implementing infrastructure solution to reduce the workload by automation.
