

Indigenous.Link

Canada's fastest growing Indigenous career portal, Careers.Indigenous.Link is pleased to introduce a new approach to job searching for Indigenous Job Seekers of Canada. Careers.Indigenous.Link brings simplicity, value, and functionality to the world of Canadian online job boards.

Through our partnership with Indigenous.Links Diversity Recruitment Program, we post jobs for Canada's largest corporations and government departments. With our vertical job search engine technology, Indigenous Job Seekers can search thousands of Indigenous-specific jobs in just about every industry, city, province and postal code.

Careers.Indigenous.Link offers the hottest job listings from some of the nation's top employers, and we will continue to add services and enhance functionality ensuring a more effective job search. For example, during a search, job seekers have the ability to roll over any job listing and read a brief description of the position to determine if the job is exactly what they're searching for. This practical feature allows job seekers to only research jobs relevant to their search. By including elements like this, Careers.Indigenous.Link can help reduce the time it takes to find and apply for the best, available jobs.

The team behind Indigenous.Link is dedicated to connecting Indigenous Peoples of Canada with great jobs along with the most time and cost-effective, career-advancing resources. It is our mission to develop and maintain a website where people can go to work!

Description

Job number: R-1004185

Location: Regina, Saskatchewan

Closing date: October 14, 2022

Language(s) required: English

Worker Type: Permanent

Cyber security expertise required

Join our team of experienced cyber security professionals responsible for the security tools, technologies and processes that underpin our security posture. Using your strong interpersonal and communication skills, you'll collaborate with colleagues to recommend and implement security improvements.

You'll help shape the vision for the Cyber Security program, apply global threat intelligence to security controls, monitor and respond to security incidents, and participate in proactive activities such as threat hunting, penetration testing and red teaming.

You're familiar with related frameworks and practices including NIST CSF, CIS or ISO 27k, SIEM, incident response, cloud security governance, and vulnerability and incident management.

What you'll do:

- Document and escalate incidents that may cause ongoing impact
- Mitigate immediate and potential threats through access to the pertinent domain
- Review log files to identify possible threats
- Test, review, maintain and administer cyber defence systems
- Analyze events for the purpose of mitigating threats
- Receive network alerts and determine the cause
- Provide timely detection, identification, and alerting of possible attacks or intrusions, anomalous activities, or misuse activities and distinguish these from benign activities

What we're looking for:

- Organized multi-tasker and critical thinker
- Innovative problem-solver who thrives in a fast-paced environment
- Proven analytical skills and natural intellectual curiosity
- Strong communicator with good judgment
- Collaborative team player

What you'll need:

- Bachelor's degree in computer science, math or engineering and at least four years of experience (or equivalent combination of education and experience)
- Knowledge of network security methodologies, cyber threats and vulnerabilities
