Indigenous.Link

Canada's fastest growing Indigenous career portal, Careers.Indigenous.Link is pleased to introduce a new approach to job searching for Indigenous Job Seekers of Canada. Careers.Indigenous.Link brings simplicity, value, and functionality to the world of Canadian online job boards.

Through our partnership with Indigenous.Links Diversity Recruitment Program, we post jobs for Canada's largest corporations and government departments. With our vertical job search engine technology, Indigenous Job Seekers can search thousands of Indigenous-specific jobs in just about every industry, city, province and postal code.

Careers.Indigenous.Link offers the hottest job listings from some of the nation's top employers, and we will continue to add services and enhance functionality ensuring a more effective job search. For example, during a search, job seekers have the ability to roll over any job listing and read a brief description of the position to determine if the job is exactly what they're searching for. This practical feature allows job seekers to only research jobs relevant to their search. By including elements like this, Careers.Indigenous.Link can help reduce the time it takes to find and apply for the best, available jobs.

The team behind Indigenous.Link is dedicated to connecting Indigenous Peoples of Canada with great jobs along with the most time and cost-effective, career-advancing resources. It is our mission to develop and maintain a website where people can go to work!

Description

About Us:

Trucking and transportation logistics company with a growing modern fleet supported by state of the art logistics technology.

Main Duties and Responsibilities:

The Business Application Programmer will be responsible for building and enhancing our in-house Transportation Management System (TMS) which will provide an efficient control and management of our Operations Department, Accounting, Data Entry, and Customs Departments, as well as our equipment units, border clearance system, software integrations, and automatic processing. Responsibilities will include:

Develop, create, and implement the in-house Fleet Management System;

Write, modify, integrate and test software codes for applications such as our Smart Fleet Management System and Transportation Management System;

Maintain existing computer programs such as Smart Fleet by making modifications as required;

Identify and communicate technical issues and make recommended solutions;

Research a variety of software products;

Develop logical and physical specifications;

Collect and document user requirements;

Prepare reports, manuals or other technical documentation on the status, operation and maintenance of integrated applications.

Benefits:

Extended Medical Insurance;

Dental Insurance.

Location of Work:

391 Creditstone Rd., Concord, Ontario L4K 1N8

Experience

Minimum 2 years' working experience as a Business Application Programmer and/or Software Developer;

Demonstrated, efficient pre-development experience of the Transport Management System (TMS) software component;

Proven experience developing software and applications specific to the transportation industry;

Proven experience in TMS software program creation and inbound support, system implementation and building applications;

Knowledge of tracking hardware for trucks and trailers and GPS signal protocol providers such as Omnitracs and/or Spireon;

Knowledge of software security protocols for protection of private and business information;

Knowledge of GPS data and hardware processes and procedures which help to integrate both hardware and GPS signals to a telematics system;

Computer programming knowledge and internal linked programs such as Infosite, SmartFleet.

Education Requirements

Bachelor Degree in Computer Science, Engineering
